Real Time Energy Management

What is RTEM?

Real Time Energy Management technology transmits a building's performance to a cloud-based system, where it is analyzed by experts and transformed into actionable insights. RTEM is the "brain" of the building, combining technology and professional support to optimize its energy efficiency as performance.

RTEM can help address challenges and problems you may be facing, including:

- NYC Local Law 97 fees
- Rising energy costs and inflation
- Endless cycle of expensive building upgrades
- Overwhelming building construction

RTEM Provides Solutions

- RTEM is a cost-effective solution available today that can help owners take action to reduce exposure to upcoming LL97 fines
- RTEM can be a hedge against rising energy costs/inflation
- RTEM can extend equipment life, reducing the need for special assessments or capital projects earlier than expected

What Our Team Does For You

- Independently review each of our qualified vendors
- Promote best practices for energy management throughout the market
- Give customers a baseline expectation for the performance of their building
- Provide a path to plan, measure, and report on new solutions for your building's future
