

To draft scoping plan comments,nyserda,17 columbia circle,albany ny 12203

Tuesday, April 19, 2022 12:08 PM

The scoping plan is extremely radical and does not serve the citizens of new york state. The plan proposes electric cars, solar panels, wind turbines, batteries ect. many of whose components are made in china, soviet union etc. These countries have a terrible history of pollution and excessive carbon generation which would negate all that the plan proposes. There was no input from every day citizens into the document. In fact it was created by climate activists, state agencies and a few college professors during the covid epidemic . The plan is being rushed and the plan is totally unknown to the general public. We cannot take away natural gas , nuclear power and oil as fuels until reliable, cost effective ,redundant energy system technology exists .Increasing unaffordable electric car use and non carbon power generation without adequate infrastructure will be a disaster. It will take 30 to 80 years as a minimum to do a transition away for carbon sourcing as apposed to 6 to 15 yrs suggested in the plan. New york state would see an mass migration of businesses and people from the state because of the severity of the standards required by the plan. The plan frequently states it emulates california's plan and we know what a disaster that state is . Any standards must be national and not make new york less competitive for businesses .The massive bureaucracy that the plan would set up from carbon trading, methane counting etc would cripple businesses and farmers .Lastly the plan is loaded with social engineering that have no place in a climate plan and must be considered in a separate forum. The assumptions re cost and benefit are extremely flawed and need to be completely reassessed by more objective groups that climate extremists. Please stop the plan now and allow elected officials to craft a reasonable, cost effective, and livable plan. Sincerely robert lamantia, 65 elmhurst rd snyder ny; We would appreciate a response to this letter if you feel facts are not correct
