To the NY Climate Action Council,

The highlights of your plan are

RIDICULOUS

I live in a rural farming area. At present I know of NO tractors that run on electricity.

Solar energy in our cold climate is very unpredictable. In the winter when we don't see much sunshine we could be stuck in the middle of a snowbank & to get a generator there would be impossible. My experience with a generator is that it runs on fossil fuel.

The cost of replacing all furnaces & hot water tanks would be very costly.

This proposal is obviously being provided by IDIOTS.

Sincerely,

Eleanor Aikens
