

As I truly believe you will discard this conversation as it disagrees and has proof to back up what I present, and it does not fit with current "Politically Motivated" agendas.

The huge unintentional consequences of NYS Governor Cuomo CLCPA will be devastating for the economy, my Children & Grandchildren and will result in severe social unrest and conflicts.

- The current infrastructure cannot handle the electrical demands this bill demands.
- Its simple physics and numbers, current Supply lines can barely handle today's load demand.
 - This law would have every building to have HVAC, cook, Lighting, charging vehicles converted to Electric
 - The heating requirements alone will crash during peak use as you will need at least 50 x the Supply lines and wattage if not more of what's available now.
 - Texas & California receive higher quantity and better quality of sunshine than NY, but they have continual black outs and ask customer to cut back on AC and now charging their cars at night
 - In December on a good day which is few we receive 8 – 9 hours sunshine what do we do for the other 15 – 16 hours? Not heat our homes, eat, or be entertained. What do you think the population will do – RIOTS!
- Look at what's happened in Canada their electric prices soared, many who converted to Heat pumps have switched back to Natural gas & Propane
- As Jimmy Carter found the true thing people care about is the economy and their pocketbooks
- Are we going to have large stockpiles of rusting cars, trucks, and equipment in everyone's front yard as there is no fuel for them?
- This will force contractor and Farmers to buy 3 pieces of equipment to do our jobs of 1 Diesel powered as the battery versions do not and will not have the capacity to run as needed for us – you and everyone who likes to eat
- Exactly where are you going to get the items needed to produce the batteries needed, it doesn't exist in the volume needed
- EVERYTHING in our society depends upon Oil & gas whether its in the manufacturing or the distribution of it
 - What are you going to do for Ocean Carriers/ Air transportation? Shutting them down due to eliminating fossil fuels will disrupt the whole world economics
 - Trains are the most efficient form of transportation, and their technology should be incorporated into the rest of it. A small Diesel engine running a Large electric motor.

Climate change has been going on "Forever" – Proof:

- Receding Glaciers in Alaska and other parts of the world are revealing but is not being reported: remarkably well-preserved stumps were part of a massive forest that disappeared after a long period of a warm climate.
- Ones in Iceland are confirmed to be 3,000 years old.
- Volcanoes erupt every year sending more into the air than all of mankind does. Do you have a plan to filter these, of course not that's impossible to do.

I and many likeminded voters would believe more in "Renewable energy" if you were going:

- To use the many untapped waterfalls around the State which are reliable, clean, and renewable.
- Stop using private jets especially the Climate czar John Kerry, who predicted Fish would be swimming down Miami streets by 2010 & house speaker Nancy Pelosi to name a few
- Bring back electric Trolley cars in the Cities
 - Electric busses are a huge failure – ask RTS in Rochester about there fleet
 - Electric Trucks can't carry the loads requiring more trips – Ask Wegmans about their failures with these trucks especially in the Rochester Salt & Cold
- The Russian have developed safe mini nuclear plants
- Natural gas is a very clean, super-efficient fuel source. to replace it with a very unreliable, costly, and in-efficient source of Solar & Wind.
 - 1st time I can remember when a proven better technology is being replaced something worse

It would be my pleasure to have a mature, civil discussion with people in power

We have been building /remolding homes & Commercial buildings to higher energy efficiencies since 2000 as we believe in reduced energy cost benefits the entity owning the property and the environment. In our rental units we found by showing prospective tenants the lower overall cost for our units was worth a small increase in the monthly rate charged and resulted in higher demand and longer retention rates.

While many of the additions to building codes are well founded, an equal number are not. They could be avoided with better Code Officer training and heavy fines for habitual offenders who make you do knee jerk reactions with unneeded new codes/laws. Get rid of the shoddy and fly by night contractors. And the deep pockets of board members that are associated with the industries that reap financial benefits from the code they help into being. Like The Arc fault breaker requirement, which has been a major headache for us for call backs as they trip too easily especially in areas that have higher electrical demands or use older appliances and equipment.

I have much more to go on about and know this is falling on deaf ears

Respectfully,

Brian G Speer
