

Dear Draft Scoping Plan Comments NYSERDA,

I am writing this to please ask you to make the right decisions for our future.
You shut down Indian Point and replaced it with Cricket Valley Power Station an
1100 megawatt gas fired facility , which
Produces 6 million tons of green house
Gases. I am not a fan of nuclear power but
I think you took a step backwards.

I have solar panels on my house they are great but they are only a supplement.
They are only 30 % efficient and wind turbines the same. The amount of space
It would need is unrealistic, you saw what happened in Texas with the wind turbines .

A lot of our fellow Americans had to do
Desperate things to survive.

No one wants to invest in hydro electric power. Hoover dam was built in the 1930's
And still here today and built to last
10000 years . It is a 2000 megawatt power
House and running today, 24 hours a day
Not missing a beat .

I know it takes a lot to design and build a place like this but it can be done and
Done well with American now how.

To do away with natural gas and oil is very dangerous to our country.
Methane is another gas that is very plentiful

In waste water treatment plants . It is a byproduct of sewage. Every plant should be self sufficient and we do
have the technology to do so .

Please make the right decisions for our future generations.
