2023 Renewable Energy Standard Solicitation:

23 large-scale renewable
energy projects

Over \$4.7 billion direct
investment projected

2,500+ jobs expected

reduced carbon emissions
—as if taking **nearly
350,000** cars off the
road annually

New York is building the energy system for today and tomorrow

The 2023 Renewable Energy Standard Solicitation

NYSERDA executed contracts with 23 new large-scale renewable energy projects that were awarded in the 2023 Renewable Energy Standard solicitation. The contracted projects are located throughout New York State.

Planned to be operational by 2028, these projects are expected to spur over \$4.7 billion of direct investment and to create more than 2,500 short- and long-term jobs in development, construction, and operations and maintenance.

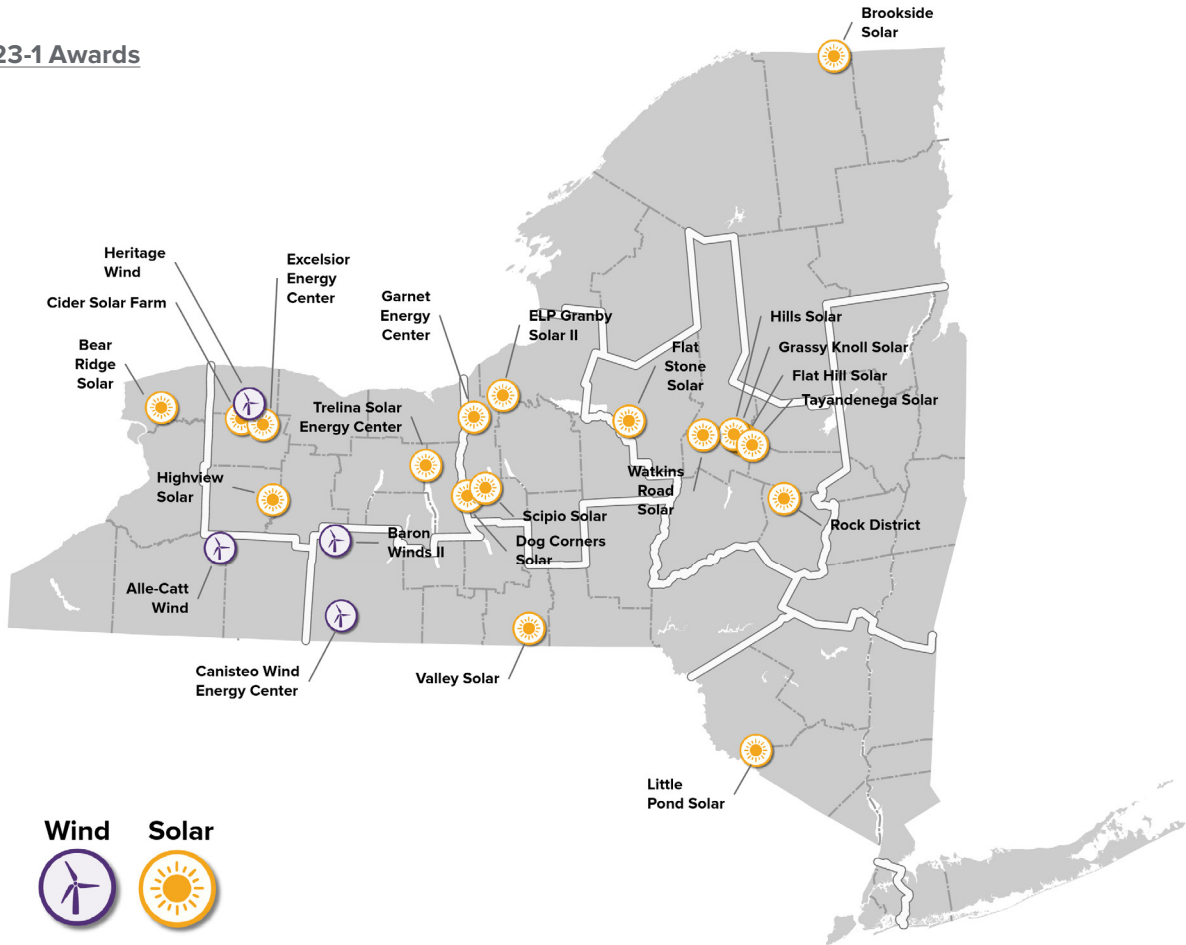

Payments under these contracts will not commence until projects have begun commercial operation, after having obtained all required permits and local approvals. Once operational, these projects will **add 2,341 megawatts of new renewable capacity** and are expected to generate **enough clean energy to power more than 700,000 homes each year** and **reduce carbon emissions by more than 2.3 million metric tons annually, the equivalent to taking nearly 350,000 cars off the road every year.**
